Mr. Gabb, I would like you to understand that yes, as the Contractor that remove what has been determined as ineligible debris. Also, even though I am fighting to be paid for that work what I am also trying to prove to everyone involved the State, Feds, the US Army Corps of Engineers and the Parish is that the work that was actually performed **fixed Indian Bayou as you might be aware at one point they wanted to dredge Indian Bayou And it's my understanding that is no longer needed,** also at the beginning of the project documentation shows that the water was stagnant and there are **witnesses that will testify that this Bayou has been congested for ages.** One of the Public Records Requests that I requested was for the Rain Gauge documents from Indian Bayou and you can see from that documentation that the tide now works in the Bayou. And I believe that through this project it can be proven that **if the work that was actually performed on this project was done on other Bayous this would fix some of the major flooding issues in our State.** So I have reached out to Government Officials the College and they are very interested in being able to prove that this could be the answer to some of the major flooding issues.

So as you are the new attorney for the Calcasieu Parish Police Jury I would hope that you are open minded to reviewing the documents because this could be to the Parish's advantage to **prove what actually needs to be done with some of your major drainages, but first we have to acknowledge what was actually done on this Project.**

Thank you!  
Billy Broussard
